ALDCBS1X2

GPS Amplified 1X2 Splitter Technical Product Data

Features

- Excellent Amplitude Balance

 Less than 1 dB variation between ports.
- Flat Group Delay
 - Less than 1ns variation between L1 and L2.
- High Output Gain
 - 22 dB gain is typical across all operating frequencies.
- Wide Accepted Frequency Range
 - Accepts signals from the entire L-Band, covering all major GNSS constellations.
- Efficiently Blocked Ports
 - $\circ~$ Uses 200 Ω resistors to prevent antenna alarm faults from connected devices.
- Matched Phase Balance
 - $\circ~$ Less than 4° of variation between ports.

Description

This Amplified Loaded DC Blocked Splitter 1X2 (ALDCBS1X2) is an active one input, two output splitter that splits signals from 1.1 GHz to 1.7 GHz. This equipment is designed to amplify and split signals within the L-band to provide two devices with the signal from a single antenna. In the standard configuration, the J1 port will pass DC voltage from a connected device and pass this power to the antenna or other devices upline from the splitter via the antenna port. The other port (J2) is DC blocked and loaded with a 200Ω resistor to simulate antenna current draw which prevents antenna alarm faults. Custom gain, DC power, and connector configurations are available upon request.

Use Cases

- Splitting and amplifying a roof antenna signal between 2 GPS/GLONASS/GNSS receivers.
- Splitting and amplifying WAAS antenna between WAAS receiver and ADS-B.
- Splitting and amplifying an antenna signal to 2 passive antennas to re-radiate 2 spaces.
- Usable as a small part of a larger signal distribution network.

General Specification

Parameter	Notes	Min	Тур	Max	Unit
Frequency Range	Covers all major GNSS constellations.			1.7	GHz
Characteristic Impedance	Unused ports should be terminated with 50Ω loads.		50		Ω
Req. DC Input V.	Operating voltage range for non-networked units.	3.3		15	VDC
Input P1dB	The 1dB compression point.		-24		dBm
Current Draw	Typical current consumption.			23	mA

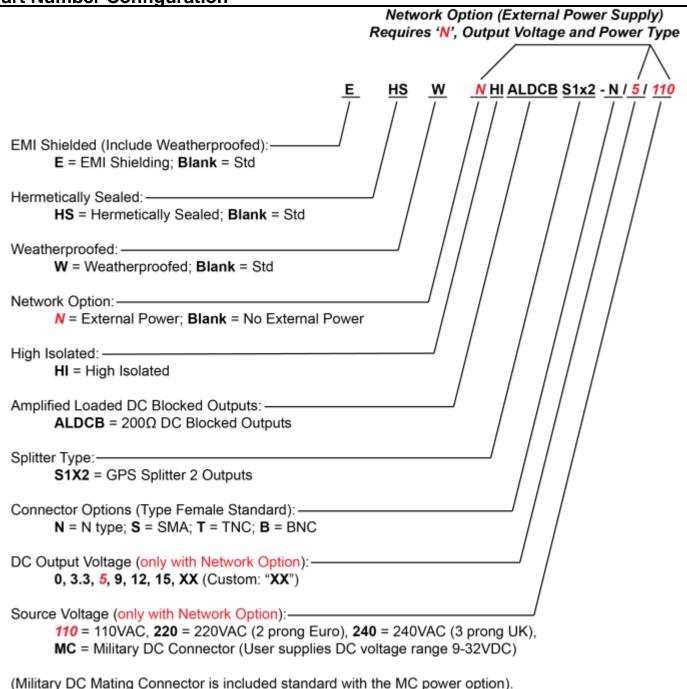

GPS L1 & L2 RF Specification (1)

Parameter		Notes	Min	Тур	Max	Uni			
Gain	The relative inc	rease in signal power provided by the amplifier.	21	22	23.5	dB			
Input SWR		nput Standing Wave Ratio: S11			2.0:1	-			
Output SWR	Output Standing Wave Ratio: S22				2.0:1	-			
Noise Figure	The increase in noise power relative to an ideal amplifier.			L1: 2.3 L2: 4.7	L1:2.5 L2:5.0	dB			
Gain Flatness	The difference in loss or gain between the L1 and L2 frequencies.			0.5	1	dB			
Amplitude Balance	The difference in gain or loss between each output port.			0.25	1.0	dB			
Phase Balance	The difference in phase variation between each output port.				4.0	deg			
Isolation	The amount of attenuation between two output ports.					dB			
Group delay flatness		signal delay between the L1 and L2 frequencies.		0.5	1	ns

ALDCBS1X2 Part Number Configuration

When no external power supply option (AC or DC) is selected, Output 1/J1 is Pass DC Standard. When external power supply option is selected, all outputs are DC blocked standard.

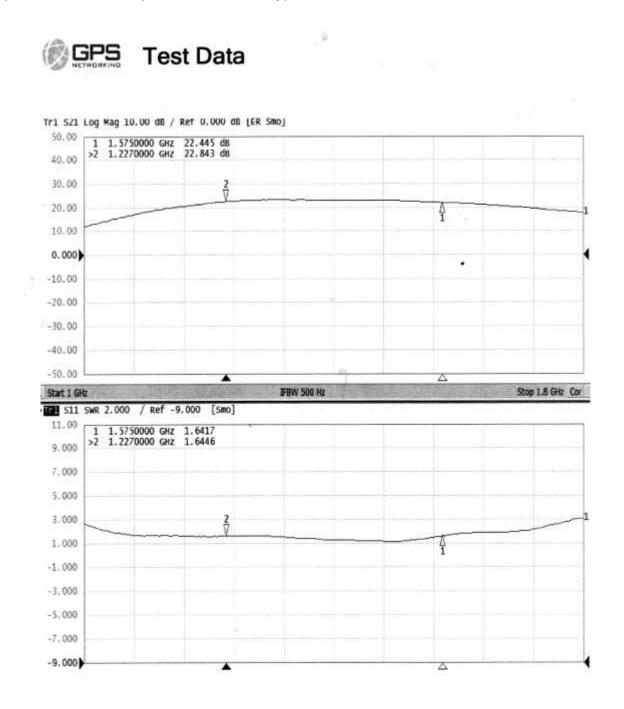

Contact GPS Networking Technical Support at 1-800-463-3063 or salestech@gpsnetworking.com for any questions regarding non-standard configurations and corresponding part numbers.

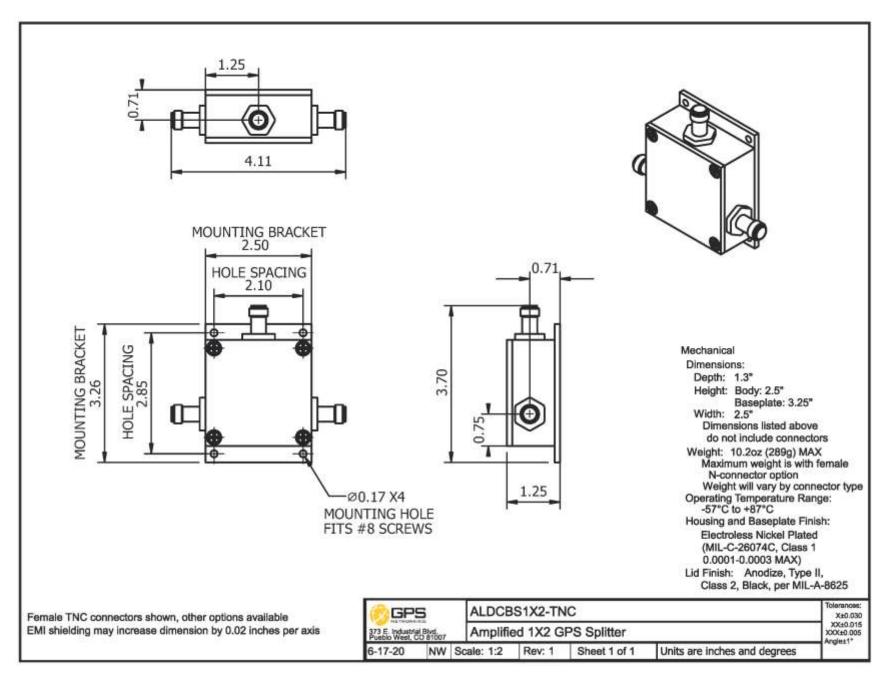

ALDCBS1X2 Performance

ALDCBS1X2 (Standard Gain, typical)

Each ALDCBS1X2 ships with a test sheet that verifies critical performance characteristics, such as gain, input VSWR, and amplitude balance; a typical VNA test sheet is shown below.
